

ELI600
400x500

The PigmentInc[®] range of manual and pneumatic heat transfer presses are built for fixation to a wide variety of materials. An industry unique dual and quad zone heater elements deliver unrivalled consistent heat across the entire bed. A pressure release vacuum assist option with fully variable pneumatic clamping ensures perfect transfer production.

Typical applications include heat transfer printing onto fabrics such as banners and garments, thicker materials such as carpets and mats, rigid goods like tile and ceramic, as well as wood, sheet metal, plastics, polyester coated synthetics and a vast range of other substrates.

ELI600 Heat Press

Sturdy, agile and practical, this model is indicated for professional applications requiring high productivity and transfer quality. This manual heat press is designed with the swing-away system that requires less physical strain from the operator, and allows the work piece to be dressed over the lower plate. This range features thermal plates of 15x15cm up to 40x50cm.

Model ELI 600
Voltage (V) 220
Power rate (kW) 2.2
Power consumption (kW/h) 0.59
Electric current (A) 10
Useful area (in) 16"x20"
Useful area (mm) 400x500
Weight (Kg) 53
Package (mm) (LxWxH) 840x550x630
